

Nestjs Course

Lab 1

1- Create Nest.js Web Api Project with name (TechXpress)

2- Create the entity (Order)

```
{
  Id ,
  Amount ,
  Longitude ,
  Latitude ,
  ClientId ,
  PaymentMethod (Cash or Visa)
}
```

3- Create this file containing Sample Data (data.js)

```
const orders = [
  { id: uuid(), amount: 1230.50 , longitude: 23.21, latitude: 31.01,
    ClientId: 1, PaymentMethod = "Cash" },
    .....
];

module.exports = orders;
```

4- Implement the following Endpoints

- GET /orders GetAllOrders
With optional filters (clientId, PaymentMethod)
- GET /orders/:id Get Order By Id
- POST /orders Create Order
- PUT /orders/:id Update Order
- DELETE /orders/:id Delete Order

5- Return suitable error codes (200 , 201 , 204 , 404 , 400)

6- Use Layered Architecture (Controller --> Service)
