

Nestjs Course

Lab 2

CRUD Operation using TypeORM & Postgres

- 1- Create Nest.js Web Api Project with name (TechXpress)
- 2- Integrate Swagger Documentation (UI , Json)
- 3- Configure the project to use TypeORM integrated with Postgres
- 4- Create the entity (Order)

```
{
    Id ,
    Amount ,
    Longitude ,
    Latitude ,
    ClientId ,
    PaymentMethod (Cash or Visa)
}
```
- 5- Implement 3-Tier Architecture (Controller , Service , Repository)
- 6- Create Custom Repository for Order => OrderRepository
- 7- Implement the following Endpoints
 - GET /orders GetAllOrders
With optional filters (clientId, PaymentMethod)
 - GET /orders/:id Get Order By Id
 - POST /orders Create Order
 - PUT /orders/:id Update Order
 - DELETE /orders/:id Delete Order
- 8- Apply Validations on DTOs (CreateOrderDto , UpdateOrderDto)
- 9- Return suitable error codes (200 , 201 , 204 , 404 , 400)
