

ES.next Lab 3

1) Using ES6 new Syntax & features:

- **Write a script to create different shapes (rectangle, square, circle, triangle) make all of them inherits from polygon.**
- **Display the area and each object parameter in your console by overriding toString()**

2) Proxy

create a dynamic object using Proxy such that it has only the following properties

- **name property that accepts only string of 7 characters**
- **address property that accepts only string value**
- **age property that accepts numerical value between 25 and 60**

3) Promise

- **Use fetch function to request
“https://jsonplaceholder.typicode.com/users”**
- **Display its output in a table using DOM object**

4) Self study: Reflect API
