Transitions & Animation

11

Transitions & Animation

Timing Function : <https://cubic-bezier.com/#.17,.67,.83,.67>

Transitions : https://www.w3schools.com/css/css3_transitions.asp

Animations : https://www.w3schools.com/css/css3_animations.asp

12

Transforms

12

Transforms

Transform 2d : https://www.w3schools.com/css/css3_2dtransforms.asp

Transform 3d : https://www.w3schools.com/css/css3_3dtransforms.asp

Dark Mode

1- add this line into your css file

```
input.css > ...  
1  @import "tailwindcss";  
2  
3  @custom-variant dark (&:where(.dark, .dark *));  
4
```

2- add class dark in html tag

```
1  <!DOCTYPE html>  
2  <html lang="en" class="dark">  
3  | <head>
```

Dark Mode

3- now you can use dark:className

```
1 <html lang="en" class="dark">
2   <body>
3     <div class="■ bg-white □ dark:bg-black">
4       <!-- ... -->
5     </div>
6   </body>
7 </html>
```

How you add the dark class to the html element is up to you, but a common approach is to use a bit of JavaScript that updates the class attribute and syncs that preference to somewhere like `localStorage`.

Tasks

In the previous task, do the following:

- Add **transitions** to **buttons** and **cards** so that they smoothly **scale** when hovered.
- Apply dark mode and allow the user to toggle between light mode and dark mode.

THANK YOU
