

What is the difference between:

- CMD & ENTRYPOINT

Problem 1:

- Run the container nginx
- Check the container status
- Start the stopped container
- Remove the container
- Remove the image

Problem 2:

- Run container ubuntu in an interactive mode
- Run the following command in the container “echo docker ”
- Open a bash shell in the container and touch a file named hello-docker
- Stop the container and remove it. Write your comment about the file hello-docker
- Remove all stopped containers

Problem 3:

- Deploy a MySQL database called app-database. Use the mysql latest image, and use the -e flag to set MYSQL_ROOT_PASSWORD to P4sSw0rd0!. The container should run in the background.

Problem 4:

- Run the image Nginx ▪ Add html static files to the container and make sure they are accessible
- Commit the container with image name IMAGE_NAME

Problem 5:

- Create 2 nginx containers with 2 different network of type bridge, enter to one of them and use curl command to view the content of the other container.
