

Name: Mostafa Shaaban Mohamed Mahmoud Shanab

Track: Web & UI

CMD vs ENTRYPOINT: Both define what runs when a container starts. ENTRYPOINT is the fixed command (you can't override it easily), CMD is the default argument (easily overridden). Think: ENTRYPOINT = the program, CMD = its default flags.

Problem1:

```
frappe@ubuntu22:~$ sudo docker run -d nginx

frappe@ubuntu22:~$ sudo docker container prune
WARNING! This will remove all stopped containers.
Are you sure you want to continue? [y/N] y
Total reclaimed space: 0B
frappe@ubuntu22:~$ s
```

The file hello-docker is GONE forever. This is the key lesson: containers don't save data by default. When you delete a container, everything inside it is deleted too.

Welcome to nginx!

If you see this page, nginx is successfully installed and working. Further configuration is required for the web server, reverse proxy, API gateway, load balancer, content cache, or other features.

For online documentation and support please refer to nginx.org.
To engage with the community please visit community.nginx.org.
For enterprise grade support, professional services, additional security features and capabilities please refer to is.com/nginx.

Thank you for using nginx.

```
frappe@ubuntu22: ~
